

## How do changes in the sky affect us?

Read the text.

What we see in the sky changes. These changes affect us and what we do.

When the sun comes up, we get out of bed to start the day.

If it is a hot, sunny day, we dress in clothes that keep us cool. If it is a cold day, we put on clothes that keep us warm. If it is raining, we wear raincoats and boots or take our umbrella.

If it is cold or raining, we play games inside. We may need to turn on a heater to keep us warm if it is very cold. If it is a sunny day, we can play outside.

When the sun goes down and night comes, we go to bed.

How do you think the changes in the sky affect plants and animals? What do owls do when the sun comes up? What happens to flowers when it is a very hot day and no rain has fallen for a very long time?
